MPC-L.AT series

MPC20-N.AT series with tipping device

MPC-A series

## Your advantages

**Reduce costs** – benefit from the maximum volume reduction of your waste and valuable recycling materials, thus cutting your disposal costs.

**Operator-friendly** – The procedure for operating the machine is clear and simple, making the work of your personnel easy as well as safe.

**Big filler aperture 2370x1720mm with the MPC-L.AT series** – with this JUMBO filler aperture, the Werner & Weber waste compactors are unrivalled in the market.

**Uncompromisingly powerful** – high fill weights, e.g. up to 5 tonnes of cardboard or up to 10 tonnes of residual waste.

### MPC series

- Portable waste compactors from Werner & Weber are compact, space-saving and, thanks to their portability, are used in a wide range of applications. Waste compactors simply compress your waste and recyclables in a closed container, therefore reducing your personnel and disposal costs.
- A particular advantage of portable waste compactors is that no additional structural modifications need to be undertaken for their erection. If there is enough space available and an electrical power connection is present, the machine can be installed immediately. Simply connect to the electrical supply with a cable and the machine is ready to use. The area of application of these compactors is the compaction of high-volume waste, such as packaging, cardboard, films/foils, etc., from wholesale and retail markets as well as industry and trade.
- The procedure for operating the machine is clear and simple; relevant information such as the full indicator makes work both easy and safe. Thanks to the low filling height and

the large filling opening, the Werner & Weber waste compactors are particularly user-friendly. The waste compactor can be filled from the ground, from a loading ramp or through the wall of a building using a waste chute.

- We can offer you a large selection of optional equipment. We have various designs of covers for the filling opening, attachment parts in order to allow the disposal vehicle to be able to pick up the compactor from either side, discharge doors with seals, remote control of the machine via cable and data plug, fill level and operational status messages via GSM, and much more.

- With an attached or stationary mounted container tipping fixture, filling the waste compactor is made even easier. The material can be collected at different locations within the company and then taken to the waste compactor with the help of containers on rollers. The automatic filler process makes work easier for your personnel and reduces costs and the time involved.
